

Dear Friends and Colleagues,

We are writing to share with you an important international initiative designed to study outcomes of coronavirus infection in people with psoriasis: PsoPROTECT <https://psoprotect.org>

PsoProtect is an international registry for clinicians to report outcomes of COVID-19 in individuals with psoriasis. The ILDS and the Global Psoriasis Atlas are both partners of Pso/Protect.

The immediate purpose of PsoPROTECT is to rapidly understand how immunomodulator therapies and comorbidities impact outcomes to COVID-19 in psoriasis and provide real time updates on cases reported for the benefit of the clinical community. Uploading case information to the website is quick. All data are de-identified. The core dataset collection is closely aligned to fields in other registries to facilitate cross registry work, including those in inflammatory bowel disease and rheumatology.

We encourage you to promote this important initiative to colleagues (including via social media) and also to upload data on any patients you may have with psoriasis who develop COVID-19 via the website: <https://psoprotect.org>

Kind regards,

Lars French

ILDS President
